

# SPEECH

---

1. Good Morning! I'm Kandarp Gajjar, representing my team, CODING BRIGADES. Today I'm here to present our project that focuses on creating a Customer Grievance Portal for One Nation, One Challan, enabling citizens to file E-challan-related complaints for accurate resolution.
2. Our project 'NishchayJyot' allows citizens to seamlessly register complaints and offers their real-time tracking along with timely notifications promoting transparency and efficient issue redressal.
3. Currently, the government offers three **decentralised** E-challan portals: the Parivahan E-challan nationwide portal, TN Police (Tamil Nadu state portal), and MTP Duty (Mumbai City complaints portal). Our proposed system aims to establish a centralised nationwide platform, enabling citizens to register complaints at the central level.

## **← Citizen's Loopholes →**

### **4. The existing system exhibits the following shortcomings :**

- a. 'Opaque progress tracking' only offers the final statuses ('pending/solved/declined') of grievances, leaving citizens uninformed.**
- b. The system fails to include mechanisms for citizens to 'appeal or raise concerns,' leaving users with a sense of powerlessness.**
- c. The lack of rejection messages specifying reasons undermines the perception of procedural fairness.**
- d. The absence of a Feedback Mechanism on the current portal restricts users from offering valuable insights.**

### **5. Our project addresses these loopholes by implementing the following :**

- a. 'Transparent and real-time progress tracking' along with timeline and notification ensures citizens are kept well-informed.**
- b. 'Appeal mechanism' that empowers users to raise concerns efficiently if unsatisfied by elevating the grievance to superior authorities.**
- c. Immediate rejection messages provide clear reasons to improve communication and uphold procedural fairness, thereby enhancing transparency.**
- d. Our system includes a feature for citizen input through feedback. Similarly, administrators benefit by utilising the data for analytics and continuous platform enhancement.**

## **← Admin's Loopholes →**

**6. For the other side of this page i.e. admins, The loopholes faced by admins include :**

- a. Lack of a structured hierarchy tree in the current solution leads to inefficiencies in resolving complaints.**
- b. The current solution lacks mechanisms to filter out spam or fake grievances, causing delays in addressing genuine complaints.**
- c. The absence of analytics hinders admins from gaining valuable insights and data-driven decision-making.**

**7. To address them our system includes :**

- a. Streamlined classification into 'Admins' and 'Super Admins'. Providing clear roles and responsibilities for efficient grievance resolution.**
- b. Alerts for admins that warn them to lookout for spam/fake grievances. This will be done by providing metrics like :**

- 1. Number of previously lodged complaints**
- 2. Ratio for 'resolved : rejected' grievances.**

**c. Analytics for both 'Admins' and 'Super Admins'.**

**i. Admins (at state levels) :**

- 1. Feedback Ratings.**
- 2. Grievance variants.**
- 3. Monthly grievance trends per region for repetitive specific issues.**
- 4. Average resolution time / category.**

**ii. Super Admins (at central levels) :**

- 1. Monitoring of admins at state levels**
- 2. Monthly solved vs rejection analysis. (region wise)**
- 3. Trends per month & per year.**
- 4. Comparative analysis of state-level performance.**
